

QA Summary Note — DocuSign Clone

Overall impression

The clone provides the core envelope workflow and broadly resembles the original DocuSign UI, but several important controls and validations are incomplete or non-functional. The main quality risk is not cosmetic difference; it is that users can progress through flows without validations or make changes that cannot be saved.

Top 5 bugs I would fix first

1. Invalid recipient email is accepted (P1) — allows an invalid recipient to proceed to Add Fields. **2. Edit Recipients Save does not work (P1)** — recipient changes cannot be saved, breaking an important correction flow. **3. Duplicate recipient email is accepted (P1)** — the same email can be added twice without validation. **4. Footer/help links are unresponsive (P2)** — multiple navigation/help destinations do nothing. **5. Recipient customization options are disabled (P2)** — expected options such as access code, private message, and advanced settings are unavailable.

Testing performed

I compared the original DocuSign and clone at 1280×960 in Chrome and tested dashboard/navigation, Get Signatures, document upload, recipient entry and validation, recipient editing, Add Fields, Templates/Advanced Search, and several header/footer controls. I also exercised invalid and duplicate recipient inputs and checked whether actions produced the expected state changes.

Skipped / not covered

CSV/PDF/image export, third-party integrations, performance/load testing, and security/penetration testing were deliberately excluded as instructed by the assignment.

Suspensions and assumptions

Several disabled controls appear to be intentionally unimplemented, including Reports/Admin, some header actions, recipient types, and external storage providers. I treated these as bugs only where the original DocuSign behavior and the visible clone UI provided enough evidence. I did not classify branding, account-specific data, or differences that could reasonably be caused by plan/account state as defects without stronger evidence.
